MC-KIT®
YOUR COMPLETE
MACHINING
AUTOMATION SOLUTION

JCE INTEGRATED SERVICES

MC-KIT ® our flagship product is designed to fully automate manually operated machining equipment, including lathes and milling machines.

The system comes complete with a control panel and associated electronics, conveniently housed in a ruggedized Pedestal.

A set of motors, sensors and metal plates, also included in the package, can be attached on the machine and provide the ultimate control system.

MC-KIT ® implements an intuitive user interface in its control panel with automated functions requiring no computing expertise.

Machinists can simply key in dimensions or select one of the pre-set functions and allow the system to do the rest. All with the precision of microns!

Effectively, a manual lathe or milling machine can be optimized to perform just like a powerful CNC at a fraction of the cost
